

Figure 1. Amplification products for the *afpA* gene using DNA of the 11 transformants (pPAS3-1 to pPAS3-11) containing plasmid pPAS3. All transformants analyzed showed positivity to the *afpA* gene. M: 1 Kb plus DNA ladder (Invitrogen).

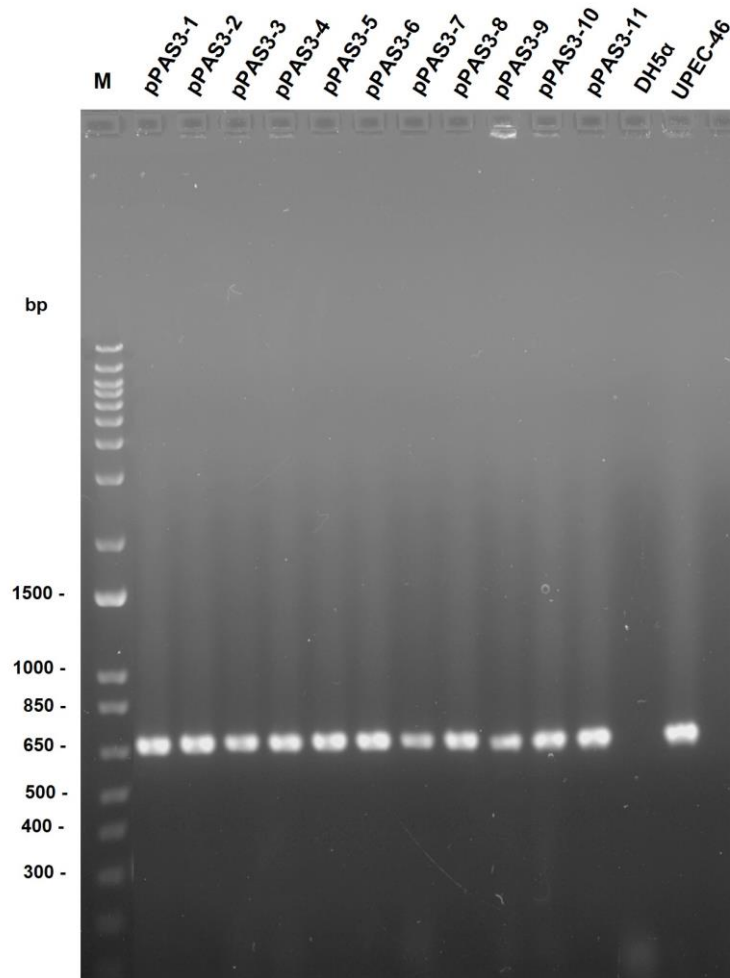

Figure 2. Plasmid extracted from clone pPAS3-1 digested with restriction enzymes XhoI and HindIII. Note the release of a ~650 bp fragment corresponding to the size of the amplification product for the *afpA* gene. M₁: Low Mass DNA ladder (Invitrogen). M₂: High Mass DNA ladder (Invitrogen).
